Section 1: Role and organisational context

Key purpose	At Serco, data isn't just numbers. It's critical to improving public services and delivering better outcomes for communities. As we support governments around the world, our Data Analytics team plays a pivotal role in transforming operational data into actionable insights, enabling smarter decisions, more effective service delivery, and measurable value for both the public and our shareholders. We're seeking a Platform Product Manager for Data & AI to lead the evolution of our enterprise data platform. This is a strategic, cross-functional role that blends product thinking, stakeholder engagement, and a strong understanding of how to deliver secure, scalable, and future-ready data capabilities.

Section 2: Role essentials

Based on the specific requirement of the role

Duties and Responsibilities	• Platform Strategy Leadership: Own the vision, roadmap, and operating model for the enterprise data platform. Ensure alignment with business needs, architecture, and service management practices. • Data Product Delivery: Oversee the development of reports, dashboards, and secure data pipelines. Coordinate internal and vendor delivery, ensuring outputs meet quality, timeliness, and compliance expectations. • Stakeholder Engagement: Act as the key liaison between the Data Analytics team and business units. Build alignment, lead business case development, and advocate for platform investments. • Operational Oversight: Manage platform operations including patching, upgrades, integrations, and service continuity. Lead incident response and root cause analysis with ITSM teams.
-----------------------------	---

- **Innovation and Roadmap Evolution:** Monitor trends in data, cloud, and automation technologies. Guide the adoption of capabilities like event-driven analytics, AI development, and ML enablement.
- **Cross-Team Coordination:** Ensure seamless collaboration with service desk, architecture, and support teams. Maintain effective communication and escalation channels.
- **Governance and Compliance:** Embed strong data governance, privacy, and security practices. Ensure compliance with Serco's Service Management System and ITIL-aligned processes.
- **People Leadership:** Provide leadership and mentoring to team members and delivery partners. Promote a high-performance, collaborative, and continuously improving team culture.

Essential technical and professional skills, knowledge and experience

What You Bring

- **Technical Mastery:** Deep experience with Microsoft Power BI, Azure Synapse Analytics, Microsoft Fabric, Azure Data Factory, SQL, and PySpark.
- **Platform Delivery Experience:** Proven ability to design, build, and manage enterprise-scale data products and platforms, supporting analytics and reporting at scale.
- **Data Engineering Expertise:** Strong foundation in data modelling, warehousing, ETL processes, and event-driven architectures for near real-time analytics.
- **DevOps Proficiency:** Skilled in CI/CD practices using Azure DevOps, including release pipeline management, automated deployments, and version control.
- **Agile Leadership:** Hands-on experience applying Agile and Scrum delivery methods, including leading sprints, retrospectives, and iterative delivery cycles.
- **Strategic Thinking:** Experience shaping platform strategy and roadmaps, aligning technical solutions with business goals and future needs.
- **Stakeholder Influence:** Excellent communication and collaboration skills across business, technical, and leadership stakeholders.
- **Data Governance Awareness:** Familiarity with data governance, privacy, compliance, and quality frameworks in enterprise environments.
- **AI/ML Familiarity:** Understanding of AI and MLOps concepts, with exposure to tools such as Azure ML SDK v2, Azure AI Foundry, and Copilot Studio.
- **Enterprise Experience:** Comfortable operating in large-scale, matrixed, or global environments with internal teams and external vendors.
- **Valued Certifications:** Preferred credentials include:
 - DP-100: Azure Data Scientist Associate
 - PL-300: Power BI Data Analyst Associate
 - DP-600: Fabric Analytics Engineer Associate
 - Other beneficial certifications: AZ-104, DP-203, ITIL Foundation, Scrum/Agile qualifications.
